

5072 ρολ (ΑΠΛΗΝΤΗΣΗ)

ΘΕΜΑ Β

B1) A) γ)

$$B) \left. \begin{aligned} \text{Σύμφρ A: } K_{\text{εφχ}}^{(A)} + U_{\text{αρχ}}^{(A)} &= K_{\text{Τη}}^{(A)} + U_{\text{Τη}}^{(A)} \\ \text{Σύμφρ B: } K_{\text{εφχ}}^{(B)} + U_{\text{αρχ}}^{(B)} &= K_{\text{Τη}}^{(B)} + U_{\text{Τη}}^{(B)} \end{aligned} \right\} \begin{aligned} U_{\text{Τη}}^{(A)} = U_{\text{Τη}}^{(B)} = 0 \\ \text{στη θέση αλληγορίας} \\ \text{η δύναμη} \end{aligned}$$

$$\left. \begin{aligned} \frac{1}{2} m v^2 + m g h &= K_{\text{Τη}}^{(A)} \\ \frac{1}{2} m v^2 + m g h &= K_{\text{Τη}}^{(B)} \end{aligned} \right\} \Rightarrow K_{\text{Τη}}^{(A)} = K_{\text{Τη}}^{(B)}$$

B2) A) γ)

$$B) \alpha = \frac{F}{m} \Rightarrow a_{\text{max}} = \frac{F_{\text{max}}}{m} \text{ επί στιγμή } t_1.$$

Το σύμφρ επιταχύνεται συνεχώς μέχρι επί στιγμή t_2 άρα v_{max} επί στιγμή t_2 .

ΘΕΜΑ Α

$$\Delta 1) \Sigma F = m \cdot a$$

$$F - T = m \cdot a \Rightarrow F - \mu m g = m a \Rightarrow a = 10 \text{ m/s}^2$$

$$\Delta 2) 0 \leq t \leq 5 \text{ s} \quad v = a t = 50 \text{ m/s}$$

$$\Delta 3) \left. \begin{aligned} W_F &= F \cdot x \\ x &= \frac{1}{2} a t^2 = 125 \text{ m} \end{aligned} \right\} \Rightarrow W_F = 625 \text{ J}$$

$$\Delta 4) \left. \begin{aligned} P_F &= \frac{W_F}{\Delta t} = F \cdot v_{\text{μ}} \\ v_{\text{μ}} &= \frac{x}{t} = \frac{125}{5} = 25 \text{ m/s} \end{aligned} \right\} \Rightarrow P_F = 5 \cdot 25 = 125 \text{ W}$$
